

## Milestone 2-Object:

What is an object?

Salesforce objects are database tables that permit you to store data that is specific to an organization. It consists of fields (columns) and records (rows).

### In This Application We Use 4 Custom Objects:

- 1.Farm
- 2.Crop
- 3.Farmer
- 4.Buyer

### Activity 1:

Create a custom object for Farm:

To create a custom object, follow these steps:

1. From setup click on object manager.
2. Click create, select custom object.

3. Fill in the label as " Farm ".

4. Fill in the plural label as " Farms".

5. Record name: Farm Name"

6. Select the data type as "Text".

7. In the Optional Features section, select Allow Reports and Track Field History.
8. In the Deployment Status section, ensure Deployed is selected.
9. In the Search Status section, select Allow Search.
10. In the Object Creation Options section, select Add Notes and Attachments related list to default page layout.
11. Leave everything else as is, and click Save.

## Activity 2:

Creation of Crop object:

1. Click on the gear icon and then select Setup.
2. Click on the object manager tab just beside the home tab.
3. After the above steps, have a look on the extreme right you will find a Create Dropdown click on that and select Custom Object.
  - a. On the Custom Object Definition page, create the object as follows:
    - b. Label: Crop
    - c. Plural Label: Crops
    - d. Record Name: Crop Name
  - e. Select the data type as "Text".
  - f. Check the Allow Reports checkbox
  - g. Check the Allow Search checkbox
  - h. In the Object Creation Options section, select Add Notes and Attachments related list to default page layout
  - i. Click Save.

## Activity 3:

Creation of Farmer object:

1. Click on the gear icon and then select Setup.
2. Click on the object manager tab just beside the home tab.
3. After the above steps, have a look on the extreme right you will find a Create Dropdown click on that and select Custom Object.
  - a. On the Custom Object Definition page, create the object as follows:
  - b. Label: Farmer
  - c. Plural Label: Farmers
  - d. Record Name: Farmer Name
  - e. Select the data type as "Text".
  - f. Check the Allow Reports checkbox.
  - g. Check the Allow Search checkbox.
  - h. In the Object Creation Options section, select Add Notes and Attachments related list to default page layout.
  - i. Click Save.

#### **Activity 4:**

Creation of Buyer object:

1. Click on the gear icon and then select Setup.
2. Click on the object manager tab just beside the home tab.
3. After the above steps, have a look on the extreme right you will find a Create Dropdown click on that and select Custom Object.
  - a. On the Custom Object Definition page, create the object as follows:
  - b. Label: Buyer
  - c. Plural Label: Buyers
  - d. Record Name: Buyer Name
  - e. Select the data type as "Text".
  - f. Check the Allow Reports checkbox.
  - g. Check the Allow Search checkbox.
  - h. In the Object Creation Options section, select Add Notes and Attachments related list to default page layout.
  - i. Click Save.

#### **Milestone 3 - Tab: Tab**

Tabs in Salesforce help users view the information at a glance. It displays the data of objects and other web content in the application.

#### **Activity 1:**

##### **Creation of Farm tab:**

Now create a custom tab.

1. Click on the Home tab, enter Tabs in Quick Find and select Tabs.

2. Under custom object tabs, click New.

3. For Object, select Farm.

4. For Tab Style, select any icon.

5. Leave all defaults as is. Click Next, Next, and Save.

## Activity 2:

### Creation of Crop tab:

Now create a custom tab.

1. Click on Home tab, enter Tabs in Quick Find and select Tabs.

2. Under custom object tabs, click New.

3. For Object, select Crop.

4. For Tab Style, select any icon.

5. Leave all defaults as is. Click Next, Next, and Save.

### **Activity 3:**

#### **Creation of Farmer tab:**

Now create a custom tab.

1. Click on the Home tab, enter Tabs in Quick Find and select Tabs.
2. Under custom object tabs, click New.
3. For Object, select Farmer.
4. For Tab Style, select any icon.
5. Leave all defaults as is. Click Next, Next, and Save.

### **Activity 4:**

#### **Creation of Buyer tab:**

Now create a custom tab.

1. Click on Home tab, enter Tabs in Quick Find and select Tabs.
2. Under custom object tabs, click New.
3. For Object, select Buyer
4. For Tab Style, select any icon.
5. Leave all defaults as is. Click Next, Next, and Save.

### **Milestone 4 - Lightning App:**

What is an App?

Apps in Salesforce are a group of tabs that help the application function by working together as a unit. It has a name, a logo, and a particular set of tabs. The simplest app usually has just two tabs.

### **Activity 1:**

#### **Create the Farm Management System app**

● From Setup, enter App Manager in the Quick Find and select App Manager.

● Click New Lightning App. Farm Management System as the App Name, then click Next

● Under App Options, leave the default selections and click Next.

● Under Utility Items, leave as is and click Next.

● From Available Items, select Farm, Crop, Farmer, Buyer Reports, and Dashboards and move them to Selected Items. Click Next. ● From Available Profiles, select System Administrator and move it to Selected Profiles. Click Save & Finish.

● To verify your changes, click the App Launcher, type Farm Management System and select the Job Application app.

Note:

1. App Launcher-Displays available apps.

2. App Name-Displays the current selected app.

### 3. Navigation menu-Displays the tabs available inside the app.

## Milestone 5 -

### Fields and Relationship: What are fields?

Fields in Salesforce represent what the columns represent in relational databases. It can store data values which are required for a particular object in a record.

#### Activity 1:

Creation of fields for the Farm objects:

1. click the gear icon and select Setup. This launches Setup in a new tab.
2. Click the Object Manager tab next to Home.
3. Select Farm.
4. Select Fields & Relationships from the left navigation, and click New

Setup Home Object Manager

SETUP > OBJECT MANAGER  
Farm

Allows users to select a value from a list you define.

Allows users to select multiple values from a list you define.

Allows users to enter any combination of letters and numbers.

Allows users to enter up to 255 characters on separate lines.

Allows users to enter up to 131,072 characters on separate lines.

Allows users to enter formatted text, add images and links. Up to 131,072 characters on separate lines.

Allows users to enter any combination of letters and numbers and store them in encrypted form.

Allows users to enter a local time. For example, "2:45 PM", "14:45", "14:45:00", and "14:45:50.000" are all valid times for this field.

Allows users to enter any valid website address. When users click on the field, the URL will open in a separate browser window.

Next Cancel

6. Enter Field Label (Farm Type), and Enter Values as (Crop, Livestock, Mixed)

7. Next, Next Click Save.

Now let's create the other fields following Activity1 steps 1 to 4 and we must choose the data types of the fields carefully.

- 1.Next we Create another Picklist Field,Enter field label (Soil Quality) enter values (Organic,Cover Crops,Composting)
- 2.Again we Create Picklist field,Field Label (Irrigation type), Enter Values (Sprinkler irrigation,Drip irrigation,localized irrigation)
- 3.Choose data type as a text,enter field label(Location) 4.Choose data type as text,enter field label (size)
- 5.Create a Master Detail relationship with Farmer Object.

## Activity 2:

### Creation of fields for the Crop objects:

- 1.Choose Data type As a text,Enter Field Label name (Crop Name),Next save.
- 2.Select Data type as date ,Enter Field label (Planting Date),then save .
- 3.Again we select data type as a date,Enter field labe (Harvest date),save
- 4.Next We Create Lookup relationship on crop object realted to Farm Object.
- 5.We select adata type as currency,Enter field Label (Actual Yield), Next Save it.
- 6.Select Data type as a Number,enter Field Label (Total Acres Harvested),Enter Maximum Length(20) and save.
- 7.Now We create Formula Field For That Select data Type As a Formula,Click Next.

8. Enter Field Label (Expected Yield per Acre), Select formula return type as Currency, click Next.

9. Enter a Formula Actual Yield Divide By Total Acre Harvested, then click next and save.

### Activity 3: Creation of fields for the Farmer objects:

1. Select Data type Phone, Enter field label (Contact Number), next Save.
2. Select Data type Picklist, Enter Field Label (State), Enter values (Telangana, Andhra Pradesh, Tamilnadu), save.
3. Choose Data type Picklist, Enter Field Label (District), Enter Values of district, next save.

4. Again select Data type as Picklist, Enter Field Label (Village), Enter Values of villages, next save.

### Creation of field dependency :

1. Now create Field Dependency For District field, Open Object Manager, Choose Farmer object, select Fields & Relationships, On Right side We have Field Dependency option, select that option.
2. Click new, Select Controlling Field as State, Dependent Field As District, Click on Continue.
3. Select the appropriate Value in each column by double-clicking them.
4. For Ex. Telangana - Yadadri Bhongir.
5. Click Include Values. And it is also the same for Andhra Pradesh, Tamilnadu with its city.
6. Click Preview, then test the dependency by selecting a different State and viewing the associate Values available for Particular state.

The screenshot shows the Salesforce Setup interface. The left sidebar contains a navigation menu with options like Setup, Home, and Object Manager. The main content area is titled 'Farmer' and shows the 'Fields & Relationships' section. A red box highlights the 'New Field Dependency' configuration form. The form has two dropdown menus: 'Controlling Field' and 'Dependent Field', both currently set to 'None'. Below these are 'Continue' and 'Cancel' buttons. The form also includes instructions and steps for creating a field dependency.

**New Field Dependency**

Create a dependent relationship that causes the values in a picklist or multi-select picklist to be dynamically filtered based on the value selected by the user in another field.

- The field that drives filtering is called the "controlling field." Standard and custom checkboxes and picklists with at least one and less than 300 values can be controlling fields.
- The field that has its values filtered is called the "dependent field." Custom picklists and multi-select picklists can be dependent fields.

**Step 1.** Select a controlling field and a dependent field. Click Continue when finished.

**Step 2.** On the following page, edit the filter rules that control the values that appear in the dependent field for each value in the controlling field.

Controlling Field: None  
Dependent Field: None

Continue Cancel

7. Click Close to close the preview window, Click Save.

## Activity 4:

### Creation of fields for the Buyer objects:

1. Select Data type as a Phone, Enter a Field Label(Contact), Save.
2. Select Data type as an Email, Enter Field Label(Email), Next save.
3. Select Data type Text area, Enter Field Label(Address), Save it.
4. Select Data type Picklist, Field Label(Buyer Type), Enter values (Wholesale, Retail), Click Save.

## Milestone 6- Profile:

### What is a profile?

A profile is a group/collection of settings and permissions that define what a user can do in salesforce. A profile controls “Object permissions, Field permissions, User permissions, Tab settings, App settings, Apex class access, Visualforce page access, Page layouts, Record Types, Login hours & Login IP ranges. A profile can be assigned to many users, but user can be assigned single profile at a time.

## Activity 1:

### Create a custom profile:

1. From setup , enter profiles in Quick Find box
2. Select profiles (Standard user).
3. Click clone.

4. For Profile, enter Sales Department.

5. Click save.

## Activity 2:

### Create a custom profile-2:

Create a profile with the profile name as “ Farm Manager” .

6. From setup , enter profiles in Quick Find box

7. Select profiles (Standard user).

8. Click clone.

## Milestone 7- Role

In Salesforce, roles are used to determine which users have access to certain data and functions within the system. They are also used to define the reporting hierarchy within an organization. Users with higher roles have greater access to data and more control over the system.

## Activity-1

### Creation of role

1. From the Quick find box search for the role and click on the roles option
2. select the set up roles option

3. Below the CEO click on add role and enter the label name as a "Farm Manager" and role name will be Automatically populated and click on save.

## Milestone 8-User :

What is a user?

A user is anyone who logs into Salesforce. Users are employees at your company, such as sales reps, managers, and IT specialists, who need access to the company's records. Every user in Salesforce has a user account. The user account identifies the user, and the user account settings determine what features and records the user can access.

**NOTE-** As Salesforce license can only be used by 2 Users at a time in Dev Org, so If you don't find salesforce license then deactivate a user who has salesforce license Or change the license type from Salesforce to any other.

### Activity 1:

To Create a user:

1. From Setup, enter Users in the Quick Find box, then select Users.
2. Click New User.

The screenshot shows the Salesforce Setup interface. In the left sidebar, the 'Users' link under 'User Management Settings' is highlighted with a red box. The main content area displays the 'All Users' page. At the top of this page, the 'New User' button is highlighted with a red box. Below the button, there is a table of existing users with columns for Action, Full Name, Alias, Username, Role, Active, and Profile. The table lists several users, including Developers, HR Manager, System Administrator, Analytics Cloud Integration User, Chatter Free User, Analytics Cloud Security User, Sales Manager, Farm Manager, and Sales Department.

3. Enter First name as Farm and last name as Manager.
4. Enter the user's name and email address and a unique username in the form of an email address. By default, the username is the same as the email address.
5. Select the role Farm Manager.
6. Select user License as Standard Platform User.
7. Select profile(Farm Manager).
8. Click save.

### Activity 2:

Create a user with a username as "Sales Department", and assign him the sales Manager profile. Follow the steps from above Activity

## Milestone 9-Sharing Rules:

What are Sharing Rules?

Sharing rules help users to share records based on conditions. It is basically created for objects whose organization-wide defaults (OWD) are set to public read-only or private because sharing rules can only extend the access and not restrict it.

Types of sharing rules,

- Owner-based Sharing Rules
- Criteria-based Sharing Rules

### Activity 1:

#### Create a sharing rule

- 1) Goto Sharing Settings, which can be found under the Quick Find section.
- 2) Scroll down and find the candidate object where a sharing rule needs to be added, and then click on New to create a new sharing rule.
- 3) Add the label of the sharing rule you want to make.
- 4) Select your rule type based on the criteria.
- 5) Select the field can join immediately check field from the Crop object.
- 6) Select the Crop as equal and value is True.
- 7) And in selecting the users to share with the section select roles and in that select Farm Manager.
- 8) And in the section of select the level of access for the users give the access Read/Write.
- 9) And save the rule.

The screenshot displays the Salesforce 'Sharing Settings' page. The left sidebar shows the navigation menu with 'Setup' and 'Object Manager' options. The main content area is titled 'Sharing Settings' and includes instructions on how to use sharing rules. A red box highlights the 'Label' and 'Rule Name' fields, both of which are set to 'Crop'. Below this, the 'Step 1: Select your rule type' section is visible, showing a table of criteria. The first criterion is 'Crop Name' equals 'True'. The 'Share with' section is set to 'Farm Manager' and the 'Access Level' is 'Read/Write'. The 'Created by' field shows 'Sushant Jaiswal' and the 'Modified by' field shows 'Sushant Jaiswal'.

| Criteria | Field     | Operator | Value | AND |
|----------|-----------|----------|-------|-----|
| 1        | Crop Name | equals   | True  | AND |
| 2        | None      | None     | None  | AND |
| 3        | None      | None     | None  | AND |
| 4        | None      | None     | None  | AND |

Share with: Farm Manager  
Access Level: Read/Write  
Created by: Sushant Jaiswal, 19/12/2024, 2:29 pm  
Modified by: Sushant Jaiswal, 19/12/2024, 2:29 pm

### Activity 2:

Create a Sharing Rule to Share the records of Buyer to Sales department with the Access of Read/Write.

Follow the steps from above Activity.

## Milestone-10: User Adoption

### Activity 1: Create a Record(Farmer)

- Click on App Launcher on left side of screen.
- Search Farm Management & click on it.
- Click on Farmer Tab.
- Click new and fill details & Save.

The screenshot shows the 'Edit Kesava' form in the Farm Management application. The form is titled 'Edit Kesava' and includes a search bar at the top. The form fields are as follows:

- Farmer Name:** Kesava
- Contact Number:** 786251778
- State:** Andhra Pradesh
- District:** Chittoor
- Village:** Vindavala
- Farm Size (Acre):** 15

The 'Save' button is highlighted with a red box. The form also includes a 'Cancel' button and a 'Save & New' button. The background shows the 'Farm Management' application interface with a sidebar and a top navigation bar.
